

The TWO MILLION DOLLAR MAN

Over the decades Ted worked in the plant, his company invested millions of dollars to make sure he was the most productive and knowledgeable gas blending process owner possible. When he retires next week, all that knowledge is going with him - to Florida.

It doesn't have to be that way. **iPILOT**[®] profiles site- and job-specific knowledge and creates an adaptive learning environment that delivers the operational knowledge Ted gained over the years. This solution captures best practices and provides a forum to extend those practices across the enterprise.

Put your plant on **iPILOT**[®].
